1. Claims 3-7, 11-15, and 18-28 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on June 27, 2008.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 2, 8, and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 6,529,133 to Tamaoki et al. Tamaoki et al discloses in Fig. 2 the claimed invention of a first compressor 22, first radiator 23, first evaporator 25, and coolant cooling means including a second compressor 18, condenser 19, 20, and a second evaporator 26 which is also the coolant cooling means for the first system. Tamaoki et al further discloses heat exchange control means including temperature sensor 6. The heat exchange control means inherently estimates the claimed drying ratio recited in claims 8 and 9. The recitation of the drying ratio control range determination means is inherently included in controller 11.

4. Claims 10, 16, and 17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
